EDITORIAL COMMENT

SMILE YOUR BRIGHTEST AND BOOST.

This is the time to boost.

Stocks are down, money is tight; there are forces at work in the east depressing the share and the money market; but there are no hard times in Tonopah. How can there be hard times when the mines are working, when there are thousands of men employed? It makes no difference in the intrinsic value of the mine, whether its stock is selling at high figures or low figures. The ore is there, and is paying for the expenses of working it. The ore is taken to the mills and to the smelter, and the money of the country is returned in exchange.

The mines of Tonopah produced in round figures last week the tidy sum of \$270,000, and that was placing the estimate of the high grade ore at the small value of \$70 a ton. This means a production of \$1,080,000 a month, or \$14,040,000 a year.

These are big figures, but they are by no means as big as the production will be. The production of the mines, and the output of the mills is being retarded by the fact that we have not sufficient power to work them to their full capacity. The power company is now constructing a line which will be for the accommodation of the mills and the mines; it will have nothing at all to do with the supply of the juice for the city. When this line is completed, which, it is promised will be very shortly, then we will see a production and reduction of ore that will amaze the world.

We are all right; there is nothing to feel badly about with regard to this camp, for it is getting better all the time. There are tributes to Tonopah, which are being felt in the strengthening of trade, and the increase of business. Such camps as Manhattan, Liberty, Garden City, Silver Bow, Revelle, Hannapah, Goldreef and Klondyke will always remain a distributing center.

Better times in the stock market will make better times in a mining camp, for we are all speculators and investors, for the very good reason that we have confidence in the camp, and we all have stocks with which we are loath to part at present prices. And this keeps money tied up. But the energetic, hustling man is always looking out for new properties, and for new discoveries; the prospector stays in the hills, supported by his own little capital, or backed by a grubstake. There are men looking for good things, no matter how dull the times may be in the east, and there are many parts of the Union where money is plentiful, where the era of depression cannot penetrate.

Wall street has not all the money in the country corralled; there is enough capital loose to develop any good property. The mines of Tonopah are being developed while they are hoisting out their ore, and when the turn in the stock market does come, what an upheaval there will be in the prices of the stocks of this camp. Let us all get in together, and boost together. Cut out the knock. If our neighbor is doing something in the way of boosting either for himself or for the camp, let us help him boost. For what is good for one is good for all, and what is good for all is good for everyone of us. Wry faces and pessimistic utterances will not bring us anything. Smile your brightest, put your best foot forward, and

Boost, boost, boost!

UNION TAILORS
ARE IN LOCKOUT

LOS ANGELES, Sept. 25.—The merchant tailors of the city, who declared unanimously for an open shop six months ago, took more drastic action and voted to lock out all union journeymen. This is the culmination of the fight long waged between the employers and the unions, and the direct result of a strike and boycott a year ago. The merchants at that time were not organized and the union's attack, though directed only against a few, affected them all for some time, and they determined on a final fight.

Now no union man can, as such, work in any tailoring establishment in Los Angeles. The Merchants' and Manufacturers' Association took a hand in behalf of the employers when the trouble began, and stands back of them now. The merchant tailors claim they never were on such a prosperous basis as at present, and all assert they will hold out against the union, no matter what the cost, but they believe they have nothing to fear, as the organization has gradually weakened and is practically without funds.

WHEN BETL REFORM.

When I notice my hand will shake
Just like a leaf,
When insomnia troubles me night-
ly,

When my nervous ill-temper gives
every one grief,
I won't speak of your warning so
lightly.

When my intellect's clouded and dull,
more or less,
I won't tell you I think you are
joking.

But until I have felt the effects of
excess
I don't think I shall let up on
smoking.

When I find I have lost my position
and friends,
When contempt for my weakness
I've noticed,

When to all kinds of reptiles delir-
ium tends,
When my once clear complexion is
bloated,

When I'm bleary-eyed and broken and
covered with rags,
I may come to your manner of
thinking,

But until I kill some one in one of
my jags
I shall keep up my moderate
drinking.

I don't think, on the whole, I'm so
awfully bad
That there's any occasion for
storming.

There are many far worse, I can see,
so begad!
I don't feel any need of reform-
ing.

On a man of fair habits you need
not begin,
With so much of abuse and as-
persion.

When I feel a conviction of horrible
sin
It will be time to think of con-
version.

RUSHING WORK
ON WONDER MINES

PROMISE OF A BRILLIANT FUTURE FOR HER PROPERTIES.

WONDER, Sept. 27.—The attention of the district is now largely concentrated upon the Nevada Wonder. The surface richness of this property has played an important part in attracting the notice of the mining world to Wonder, and it is regarded as representative of the district, not only by outside observers, but also by the people here. In less than a month the permanent shaft, which is now down 425 feet, will have reached the 500-foot level, from which point a short crosscut will be run to the ledge. The showing on the vein at this depth, which will be greater than that so far attained by any other company, is regarded as indicative of what will be developed throughout the district when depth is reached. All of those interested in Wonder are therefore awaiting with much interest the progress of Nevada Wonder work.

That J. B. Daniel, general manager of the Nevada Wonder, and his Philadelphia and Tonopah associates, who are among the most expert and successful mining men in the United States, firmly believe in the richness of their own mine and of the district, is indicated by the fact that they have just completed arrangements for the installation of an elaborate electrical system for bringing power to Wonder to operate not only their own machinery but that of other mines, but also to furnish motive power for an improved chlorination process mill.

The promise for a brilliant future for the Nevada Wonder is increased by the recent showings on the adjoining Hidden Treasure, where, at a depth of 125 feet, a 45-foot ledge carrying values all the way across has recently been uncovered. The work on this property received a setback last week through the breaking of the gearing on the engine operating the big hoist, but the machinery has been repaired and the development is being pushed with greater vigor than ever.

A number of the Hidden Treasure employees took advantage of the lull in the work last week to hurry to the scene of a new strike about 100 miles due north of Wonder and 40 miles south of Winnemucca. A. J. Smith, a citizen of Wonder, located there a few weeks ago a group of claims through which runs a ledge which carries average values for 1500 feet on the surface of between \$50 and \$100 in gold and silver. Mr. Smith's report of his find upon his return to Wonder caused a rush from this camp, and most of the surround-

ing ground over a large area has been located by Wonderites. The new camp has been named Gold Bank. Owing to its proximity to the main line of the railroad and the excellent wagon road to Winnemucca, ore running \$50 to the ton will be profitable for shipment, and it is said that large quantities of ore carrying even greater values can be shipped immediately from the surface. Murray Scott of Wonder has general direction of the ground upon which the original strike was made, and has announced that he intends to throw a large part of it open to leasers.

It is reported that a strike of high grade ore has been made in the drift from the inclined shaft of the Spider-Wasp. This shaft has been sunk to a depth of fifty feet on the hanging wall of the ledge, which has been found to have a width of ten feet, with six feet averaging \$75 to the ton. The ore uncovered this week in the high grade shoot shows values mounting into the hundreds. The Spider-Wasp, in addition to the incline shaft, has a two-compartment vertical shaft which is down about 175 feet from which crosscuts will be run at each 100-foot level to at least 500 feet. There is little doubt that in addition to great bodies of milling ore a large quantity of high grade will be stopped down in these crosscuts.

A strong indication of the richness and permanency of the Spider-Wasp ledge is found on the adjacent Lost Chord ground, where at a depth of about 100 feet in the winze, the vein has been found to have a width of at least 30 feet and carries values as high as \$300 to the ton. The Lost Chord ground is controlled by Magnus Kjesberg, who made a big fortune at Nome, but believes that he will make an even bigger one in the Wonder district.

The annual meeting of the board of directors of the Jack Pot Mining Company was held early this week in this district. Marvin Ish of Goldfield was re-elected president of the company. The directorate remains unchanged except that T. J. Stroud, the original locator of the Jack Pot, has been replaced on the board by F. M. McMillan, one of the most expert mining men in the State. The other directors are M. E. Ish, N. D'Arcy, J. S. Curtis and W. H. Erb. There will be no important changes in the general policy of the company. New men will be added to the force, already thirty-five strong, as rapidly as General Manager Harris can procure those who commend themselves to him for competency. The work is now chiefly devoted to the drift on the 200 and 300 foot levels. On the former there has been 200 feet of work completed, and on the latter about 90 feet. A foot of the vein on the 300-foot level carries values as high as \$500 to the ton. Regular shipments are being made from the Jack Pot, but the company is by no means sending out as much ore as it might, the purpose being to ship

just enough at present to pay the running expenses of the mine.

Another property from which ore is now going out regularly to the smelter is the Vulture, which has a body of ore in the upraise which averages about \$150 to the ton.

A group of claims from which the people of Wonder are expecting big developments are the Gold Kings, upon which the original locators are running a tunnel which is in 275 feet, and which, according to strong indications, will cut at least five parallel ledges within the next 100 feet. All of these veins have yielded rock on the surface from which gold pannings have been obtained, and the expectation is that a highly valuable gold property will be developed here. The surrounding properties, among which are the Desert Wonder, Christmas Wonder and the Great Eastern, are also looking extremely well. The development work on the latter has been given renewed vigor this week under the management of A. H. Douglas. The shaft is down 100 feet, and crosscutting is to be started at once toward the ledge which traverses this section of the district in an easterly and westerly direction.

Work will be resumed within a few days on the Veina Grande, which has a highly promising ledge. On the Christmas Wonder, where a complete equipment of machinery will be installed, the Joe Wonder, June Wonder, the Rex, and other properties which have been affected by the summer lull, work is about to be resumed. Persistent work has been done on the Daisy Wonder and the Monette Wonder, which are controlled by the Goldfield firm of Davis and Wheeler. On each of these properties a hoist is in operations, and on the Daisy, where the shaft is rapidly reaching the 300-foot level, the formation is hardening and the moistened condition of the rock is giving strong indications of water. The superintendent believes that when this water is reached, at about 300 feet, a body of sulphide ore will be uncovered. Prominent operators from New York and other centers have visited Wonder within the last few days and those who went out during the heated term are returning daily. Nearly as strong an inclination is now being shown on the part of the people here to buy Wonder stocks as that which made the local trading notably active last spring. Never has the confidence in the district been as strong as it is at present.

A Lander (Colo.) man, called to serve on a jury, tried to get off by claiming he was too big for such work.

ANOTHER RICH STRIKE ON DAISY

The Madigan lease on the Round Mountain Daisy has been the sensation of the district this week. On Tuesday Mr. Madigan shot into a pocket which, for quality and richness of ore, equals almost any ever taken from the workings in the palmy Munholland days of the lease. The pay streak had been narrowing somewhat when the find was made, but now it has come in stronger than ever and a high grade milling ore is being taken out.

William Madigan, owner of the lease, is an old time Colorado miner and this recent strike of specimen ore has not been entirely unexpected by him. Several sample sacks of the rich dope were saved out for specimens and the remainder was sacked and will go in on the mill run which will soon be made of ore already on the dump. Of this there is probably 100 tons of ore on the Madigan dump that will go better than \$100 to the ton.

Supt. Thomas E. McSorley, of the Daisy company, is now in California and one of the results of his trip will undoubtedly be the installing of a mill at an early date. No company in the district is better fixed for putting in a mill than the Daisy, they owning all the water in the district. And that there is an urgent need for a mill on their property is an admitted fact. The Madigan lease alone would produce enough ore to keep a mill going, and with the Solid Gold lease, of which Cy Johnson is manager, operating on the same ledge as the Madigan there should be something coming up for the mill to practice on. Meantime the Booth lease is in high grade milling ore and preparations going forward for extensive operations on that ground. Then with the Crescent lease of Cy Johnson going down with two shifts of men and a power hoist and the company doing ditto right alongside—both going after the big ledge and now in sulphide showing the best in camp—by all means a mill is wanted.—Round Mountain Nugget.

Mothers with little children need no longer fear croup, colds or whooping cough. Bees Laxative Cough Syrup tastes good. It works off the cold through the bowels, clears the head. Guaranteed. Sold by Tonopah Drug Co.
